NATE

NATE is a duo developed for SRT ascending: an ultra-light chest harness and a compact, adjustable foot loop to optimise every move. Together, they provide an optimal support for your torso, great comfort and improved efficiency when ascending.

SRT CHEST HARNESS AND FOOT LOOP

DESCRIPTION

Every move counts when your day is spent climbing. The NATE range has been developed to reduce tiredness, increase comfort and maximise efficiency for arborists, without compromise for lightness and robustness.

The NATE chest harness uses an innovative weaving technique, no seams for the loops on the chest straps, this allows for less weight and a higher resistance. The integrated, compact foam is used for the optimal support to the user's back while staying flexible and light. The harness unique X design offers an even distribution of effort and reduces the strain on shoulders and back during long ascents.

The chest harness can adapt to morphologies with 2 adjustment buckles for more precision. It is equipped with a quick-release buckle to slip it on and remove it easily, even when wearing gloves. The symmetrical loops at both sides enable the climber to fix the foot loop directly to the harness, no need to stow it away.

The NATE foot loop is very compact and light, can be used with most chest ascender of the market (similar to the Croll) and adapted to all shoes. There are 2 adjustment possibilities (upper and lower parts) for a very precise fit and maximal efficiency during ascent. The elastic has been specially designed with our engineers and offers the ideal tension: short, with a dynamic spring, the ascender moves back up easily, more smoothly.

The innovation of the NATE range is also in the connection between the chest harness and the foot loop. The foot loop is fixed to the lower loop of the harness, for a better support of the torso. When the foot loop is pushed down, the tension is distributed through the X-design of the harness, keeping the torso upright and reducing the effort needed for the ascent. Lower physical strain, more fluidity: every detail has been thought out to improve climber's daily work.

The NATE chest harness and foot loop are used together for optimal experience, but they can also be used separately if needed.

TECHNICAL INFORMATION

| | WEIGHT | MATERIAL | COLOUR(S) | DIMENSIONS |
|---------------------------|--------------------------------|--|---------------------------------------|---|
| NATE chest harness | ~ 135 g | Cordura®-type textile PE foam Polyester straps Nylon buckles HMPE connection loops | Black / Beige | Waist size: 85 to 130 cm (33.5 to 51.2 in) |
| NATE foot loop | ~ 86 g | Polyester strap / Rubber Stainless steel adjustment buckles | Black | Unslackened length: 65 cm (25.6 in) Slackened length: 105 cm (41.3 in) |
| Accessory mini-carabiners | LOCKI: ~ 15 g SIGYN: ~ 13 g | High-resistance aluminium | Matt black (body) Matt grey (gate) | LOCKI: 64 x 42 x 12 mm SIGYN: 64 x 40 x 8 mm |
